DISCLAIMERS

Commissions, management fees and expenses all may be associated with an investment in products (the "Global X Funds") managed by Global X Investments Canada Inc. The Global X Funds are not guaranteed, their value changes frequently and past performance may not be repeated. Certain Global Funds may have exposure to leveraged and inverse leveraged investment techniques that magnify gains and losses which may result in greater volatility in value and could be subject to aggressive investment risk and price volatility risk. Such risks are described in the prospectus. The prospectus contains important detailed information about the ETF. **Please read the relevant prospectus before investing.**

The Global X Funds include our BetaPro products (the "BetaPro Products"). The BetaPro Products are alternative mutual funds within the meaning of National Instrument 81-102 Investment Funds and are permitted to use strategies generally prohibited by conventional mutual funds: the ability to invest more than 10% of their net asset value in securities of a single issuer, to employ leverage, and engage in short selling to a greater extent than is permitted in conventional mutual funds. While these strategies will only be used in accordance with the investment objectives and strategies of the BetaPro Products, during certain market conditions they may accelerate the risk that an investment in shares of a BetaPro Product decreases in value.

The BetaPro Products consist of our Daily Bull and Daily Bear ETFs ("Leveraged and Inverse Leveraged ETFs"), Inverse ETFs ("Inverse ETFs"), and our BetaPro S&P 500 VIX Short-Term Futures™ ETF (the "VIX ETF"). The Leveraged and Inverse Leveraged ETFs and certain other BetaPro Products use leveraged investment techniques that can magnify gains and losses and may result in greater volatility of returns. These BetaPro Products are subject to leverage risk and may be subject to aggressive investment risk and price volatility risk, among other risks, which are described in their respective prospectuses. Each Leveraged and Inverse Leveraged ETF seeks a return, before fees and expenses, that is either up to or equal to either 200% or –200% of the performance of a specified underlying index, commodity futures index, or benchmark (the "Target") for a single day. Each Inverse ETF seeks a return that is –100% of the performance of its Target. Due to the compounding of daily returns a Leveraged and Inverse Leveraged ETF's or Inverse ETF's returns over periods other than one day will likely differ in amount and, particularly in the case of the Leveraged and Inverse Leveraged ETFs, possibly direction from the performance of their respective Target(s) for the same period. For certain Leveraged and Inverse Leveraged ETFs that seek up to 200% or up to -200% leveraged exposure, the Manager anticipates, under normal market conditions, managing the leverage ratio as close to two times (200%) as practicable however, the Manager may, at its sole discretion, change the leverage ratio based on its assessment of the current market conditions and negotiations with the respective ETF's counterparties at that time. Hedging costs charged to BetaPro Products reduce the value of the forward price payable to that ETF.

The VIX ETF, which is a 1x ETF, as described in the prospectus, is a speculative investment tool that is not a conventional investment. The VIX ETF's Target is highly volatile. As a result, the VIX ETF is not intended as a stand-alone long-term investment. Historically, the VIX ETF's Target has tended to revert to a historical mean. As a result, the performance of the VIX ETF's Target is expected to be negative over the longer term, and neither the VIX ETF nor its target is expected to have positive long-term performance. BetaPro Inverse Bitcoin ETF ("BITI"), which is an up to -1X ETF as described in the prospectus, is a speculative investment tool that is not a conventional investment. Its Target, an index which replicates exposure to rolling Bitcoin Futures and not the spot price of Bitcoin, is highly volatile. As a result, the ETF is intended as a stand-alone investment. There are inherent risks associated with products linked to crypto-assets, including Bitcoin Futures. While Bitcoin Futures are traded on a regulated exchange and cleared by regulated central counterparties, direct or indirect exposure to the high level of risk of Bitcoin Futures will not be suitable for all types of investors.

The BetaPro Products include the 3x and -3x ETFs and will use leveraged investment techniques that can magnify gains and losses and may result in greater volatility of returns. These 3x and -3x ETFs are subject to leverage risk and may be subject to aggressive investment risk and price volatility risk, among other risks, which are described in their prospectus. Each 3x and -3x ETF seeks a return, before fees and expenses, that is equal to either 300% or –300% of the performance of a specified underlying index (the "Target") for a single day. Due to the compounding of daily returns, a 3x and -3x ETF's returns over periods other than one day will likely differ in amount and possibly direction from the performance of their respective Target(s) for the same period. Hedging costs charged to BetaPro Products reduce the value of the forward price payable to that ETF.

An investment in any of the BetaPro Products is not intended as a complete investment program and is appropriate only for sophisticated investors who have the capacity to absorb a loss of some or all of their investment. **Please read the full risk disclosure in the prospectus before investing. Investors should monitor their holdings in BetaPro Products and their performance at least as frequently as daily to ensure such investment(s) remain consistent with their investment strategies.**
